PROJECT FINAL REPORT

Team ID:	SWTID-2026-7788
Project Name:	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Submission Date:	29 September 2026

1. INTRODUCTION

- **1.1 Project Overview:** An automated ServiceNow Flow Designer solution designed to streamline and expedite standard laptop procurement and fulfillment for enterprise IT teams.
- **1.2 Purpose:** To eliminate manual approval bottlenecks, reduce order fulfillment time, and ensure compliance with standard corporate hardware configurations.

2. IDEATION PHASE

- **2.1 Problem Statement:** Manual tracking of standard laptop orders leads to procurement delays, inconsistent manager approvals, and lack of real-time status visibility.
- **2.2 Empathy Map Canvas:** Analyzed the pain points, needs, and expectations of employees requesting hardware and IT procurement managers handling fulfillment.
- **2.3 Brainstorming:** Evaluated automated workflows, catalog item standardization, and automated trigger conditions using ServiceNow Flow Designer.

3. REQUIREMENT ANALYSIS

- **3.1 Customer Journey map:** Mapped the end-to-end user experience from submitting a laptop catalog request to final delivery and asset tagging.
- **3.2 Solution Requirement:** Automated approvals based on department budget thresholds, automatic task creation for procurement agents, and status notifications.
- **3.3 Data Flow Diagram:** Illustrated data movement between the Service Catalog, Flow Designer triggers, Approval engines, and Procurement tables.
- **3.4 Technology Stack:** ServiceNow Platform, Flow Designer, Service Catalog, JavaScript (Business Rules / Script Includes).

4. PROJECT DESIGN

- **4.1 Problem Solution Fit:** Direct mapping of manual bottlenecks to automated Flow Designer triggers and state transitions.
- **4.2 Proposed Solution:** A unified automated request-to-fulfillment workflow for standard laptop ordering with zero-touch routing for standard configurations.
- **4.3 Solution Architecture:** Modular architecture featuring Client Portal, Service Catalog Integration, Flow Engine, and Asset Management database.

5. PROJECT PLANNING & SCHEDULING

- **5.1 Project Planning:** Structured timeline covering requirement gathering, Flow Designer configuration, catalog item setup, UAT testing, and deployment phases.

6. FUNCTIONAL AND PERFORMANCE TESTING

- **6.1 Performance Testing:** Validated flow execution speed, concurrent request handling, and trigger response times under simulated heavy load.

7. RESULTS

- **7.1 Output Screenshots:** Visual documentation showcasing Service Catalog item forms, Flow Designer execution traces, automated approval emails, and request dashboards.

8. ADVANTAGES & DISADVANTAGES

- **Advantages:** Reduced procurement cycle time, automated audit trails, zero manual routing errors, and improved user satisfaction.
- **Disadvantages:** Initial setup requires strict adherence to standardized hardware catalogs and pre-defined approval matrix hierarchies.

9. CONCLUSION

The automated IT procurement workflow successfully addresses manual inefficiencies by leveraging ServiceNow Flow Designer, delivering a scalable, transparent, and rapid hardware requisition process.

10. FUTURE SCOPE

Integration with external vendor APIs for automated drop-shipping, AI-based anomaly detection for hardware requests, and predictive inventory forecasting.

11. APPENDIX

- **Source Code (if any):** Custom Flow Actions, Script Includes, and Business Rule scripts.
- **Dataset Link:** ServiceNow Demo Instance & Procurement Test Cases Repository.
- **GitHub & Project Demo Link:** GitHub Repository & Video Demo
